SEVERAL NEW OWES

Present and a consideration of the artistic branch Comment of the second of the s

cards rolembly.

The Reader.

IT is a fact of general notoriety, that notwithstanding the numerous theories published, and almost universal practice, of a science, where profit and amusement are combined, a capital whist player is scarcely ever, and even what may be termed a good one, but rarely, met with.

THERE is, indeed, in almost every provincial town some 'Squire, Lawyer, or Parson, who, you are told, plays an excellent game of whist; but a judge always finds them ignorant of what

2007963

may be termed their alphabet, and at best, possessed of a good memory, and capable perhaps of playing their own cards tolerably. The reason of this will appear obvious to those who reflect, that in all other arts and sciences, no man but commences by making himself master of the first rudiments; but the whist player, in general, sits down to lose perhaps considerable sums of money, without any further preparation than the having got a few general maxims by rote, which, from want of comprehending, he applies universally, and is consequently much oftener wrong than right in their application. what may be termed a good

When the beginner reads, that with two or more of a sequence to his partner's lead, (as king and queen) he should put on the lowest, he does so, or not, generally, without thinking it material; but after he is made to

comprehend, that his queen's passing demonstrates to his partner that the king cannot be in his left-hand adversary's hand, or the knave in his, and the consequent advantages to him in playing his suit (whereas if he puts on the hing, it leaves him in ignorance as to the queen and hnave) he will never after err in those cases, and will also know how to profit by similar correctness in his future partners.

To beginners I wish to inculcate the absolute necessity that they should proceed gradually; and before they sit down to play at all, make themselves masters of the different leads, modes of playing sequences, and some few of the most simple rules. When they feel within themselves that they have acquired some insight into the theory, let them begin to reduce it to practice in the best set of players they can meet with. Beginning to play with bunglers,

TO THE READER.

lers, will not only prevent their present improvement; but, as experience shews, when once they have acquired erroneous ideas, they will find it next to impossible to eradicate them in future.

By these means they will gradually acquire a knowledge of the more intricate combinations of the game, and comprehend when and why the general maxims are to be adhered to or violated; without which, I cannot too often repeat, they more frequently puzzle than inform the player.

Though in many instances I have deviated from the common maxims; yet I am not vain enough to think I shall add much to the knowledge of the experienced whist player; but I am convinced, that an attentive study of this little treatise, in the mode prescribed, will enable the beginner to sit down without disadvantage, in a very

TO THE READER.

short time, with most sets he meets with. It is needless to tell those who play for considerable stakes, that it is their interest to acquire a knowledge of the game, at least, sufficient to defend their money; but it is in my opinion, equally necessary to the players for amusement, as they term it, which for the most part consists, to a bungler in being scolded and found fault with, from the moment he sits down to the breaking up of the party.

How far I have succeeded in my intention must be left to the judgment of the Readers, to whom, with all due respect, these Maxims are dedicated by

THE AUTHOR.

A CHARLES AND A SHEET OF STREET

Introduction.

THE following definition of the game of Whist is recommended to the attentive perusal of the Reader, previous to his studying the maxims; as nothing will facilitate his comprehension of them so much as a clear idea of the ultimate end to which they all tend.

Whist is a game of Calculation, Observation, and Position or Tenace.

Calculation teaches you to plan your game, and lead originally to advantage; before a card is played, you suppose the dealer to have an honour and three other trumps; the others, each an honor and two others. The least reflection will shew, that

INTRODUCTION.

as it is two to one, that your partner has not a named card; to lead on the supposition he has it, is to play against calculation. Whereas the odds being in favour of his having one of two named cards, you are justified in playing accordingly. Calculation is also of use on other occasions, which the maxims will elucidate; but after a few leads have taken place, it is nearly superseded by observation. Where the set are really good players, before half the cards are played out, they are as well acquainted with the material ones remaining in each other's hands as if they were to see them .-Where two regular players are matched against two irregular ones, it is nearly the same advantage as if they were permitted to see each other's cards, while the latter were denied the same privilege.

It is an axiom, that the nearer your play approaches to what is called the dumb man, the better.

INTRODUCTION.

These may be called the foundation of the game, and are so merely mechanical, that any one possessed of a tolerable memory may attain them.

After which comes the more difficult science of position, or the art of using the two former to advantage; without which, it is self-evident, they are of no use. Attentive study and practice, will, in some degree, ensure success; but genius must be added before the whole finesse of the game can be acquired—however,

DIRECTIONS AND MAXIMS

FOR

Beginners.

I.

STUDY all written maxims with the cardsplaced before you, in the situations mentioned. Abstract directions puzzle much oftener than they assist the beginner.

11.—Keep in your mind that general, maxims pre-suppose the game and hand, at their commencement; and that material changes in them, frequently require that a different mode of play should be adopted.

111. - Do not attempt the practice till you have acquired a competent knowledge of the theory; and avoid as much as possible,

at first, sitting down with bad players. It is more difficult to eradicate erroneous, than to acquire just ideas.

IV.—Never lead a card without a reason—though a wrong one; it is better than accustoming yourself to play at random.

V.—Do not at first puzzle yourself with many calculations. Those you will find hereafter mentioned are sufficient, even for a proficient.

VI.—Do not accustom yourself to judge by consequences. Bad succeeds sometimes, when good play would not. When you see an acknowledged judge of the game play in a manner you do not comprehend, get him to explain his reasons, and while fresh in your memory, place the same cards before you; when once you can comprehend the case, you will be able to adapt it to similar situations.

VII.—Before you play a card, sort your hand carefully, look at the trump card, and

YOUNG WHIST PLAYER.

consider the score of the game, the strength of your own hand, and form your plan on the probable situation of the cards; subject however to be changed, should any thing fall to indicate a different one; after which, never look at your hand, till you are to play—without attending to the board no maxims or practice can make even a tolerable whist player.

VIII.—Observe silently and attentively the different systems of those with whom you commonly play; few but have their favorite one, the knowledge of which will give you a constant advantage: one leads by preference from an ace, another never but through necessity. (This will often direct you in putting on the king second.) The players of the old school never lead from a single card without six trumps; many do from weakness; some have a trick of throwing down high cards to their adversary's lead, and then affect to consider (though they have no alternative) to deceive: - Observation will enable you to counteract this, and turn it to your own profit.

IX.—The best leads are from sequences of three cards or more. If you have none, lead from your most numerous suit, if strong in trumps, and rather from one headed by a king than a queen; but with three or four small trumps, I should prefer leading from a single card to a long weak suit.

N. B. This is contrary to the usual practice, especially of the players of the OLD SCHOOL.

X.—The more plainly you demonstrate your hand to your partner the better. Be particularly cautious not to deceive him in his or your own leads, or when he is likely to have the lead—a concealed game may now and then succeed in the suits of your adversaries; but this should not be attempted before you have made a considerable proficiency; and then but seldom, as its frequency would destroy the effect.

XI.—At the commencement of a game, if you have a good hand, or if your adversaries are considerably advanced in the score, play a bold game; if otherwise, a more cautious one.

YOUNG WHIST PLAYER.

XII.—Be as careful of what you throw away, as what you lead; it is often of bad consequence to put down a tray, with a deuce in your hand. Suppose your partner leads the four, your right-hand adversary the five, and you put down the tray, it ought. to be a certainty, that you ruff it next time; but if he finds the deuce in your hand, and you frequently deceive him by throwing down superior cards, it will destroy his confidence, and prevent his playing his game on similar occasions. I would wish to inculcate these minor qualifications of whist playing to the beginners, because, they are attainable by every body; and when once the great advantages of this kind of correctness is seen, the worst player would practice it, as constantly as the best, attention being all that is necessary.

XIII.—Do not lead trumps, merely because an honour is turned up on your left, or be deterred from it, if on your right hand.— Either is proper, if the circuinstances of your hand require trumps to be led; but neither otherwise.

XIV .- Finesses are generally right in

trumps, or (if strong in them) in other suits, otherwise they are not to be risked but with caution.

XV.—Never ruff an uncertain card, if strong, or omit doing it if weak in trumps; this is one of the few universal maxims, and cannot be too closely adhered to, even did you know the best of the suit was in your partner's hand: it has the double advantage of making an useless trump, and letting your partner into the state of your hand, who will play accordingly.

XVI.—Keep the command of your adversary's suit as long as you can with safety; but never that of your partner.

XVII.—Do not ruff a thirteenth card second hand if strong; but always, if weak in trumps.

XVIII.—Always force the strong, seldom the weak, but never the two; otherwise you play your adversaries' game, and give the one an opportunity to make his small trumps, while the other throws away his losing cards. It is a very general as well as fatal error, but the extent of it is seldom comprehended by unskilful players, who seeing the good

YOUNG WHIST PLAYER.

effect of judicious forces, practice them injudiciously, to their almost constant disadvantage. The following effect of a force is too obvious not to be instantly comprehended. I have only to tell the student, that the same principle operates through the fifty-two cards, however various their combinations; and that a steady consideration of it, is one of the first necessary steps towards acquiring an insight into the game.

A has a seizieme major in trumps, a quart major in a second, and a tierce major in a third suit. B, his adversary, has six small trumps, and the entire command of the fourth suit: in this case it is obvious that, one force on A gains the odd trick for B, who without it loses a slam. Though so great an effect may seldom be produced, still there is scarcely a rubber where the truth of the maxim is not experimentally demonstrated.

XIX.—When, with a xery strong sait, you lead trumps, in hope your partner may command them, shew your suit first. If you have the strength in trumps, in your hand, play them originally.

XX.—With the ace and three other trumps, it is seldom right to win the first or second leads in that suit, if made by your adversaries, unless your partner ruffs some other.

XXI.-With a strong hand in trumps, particularly if you have a long suit, avoid ruffing, and still more over-ruffing, your right-hand adversary, as much as possible. As this is a maxim, less understood, less practised, and more indispensibly necessary, than almost any other, I will endeavour to explain it to beginners, as clearly as I am capable of doing: - Cards being nearly equal, the point to which all the manœuvres of good whist players tend, is to establish a long suit, and to preserve the last trump, to bring it into play, and to frustrate the same plan of their adversaries. With an honor (or even a ten) and three other trumps, by well managing them, you have a right to expect success. In this case do not overtrump your right-hand adversary early in the hand; but throw away a losing card; by which, there remaining but twelve rumps, your own hand is strengthened, and

YOUNG WHIST PLAYER.

your partner has the tenace, in whatever suit is led; whereas had you over-ruffed, your would have given up the whole game, to secure one trick. But there are reasons for breaking this rule :- 1st. If your lefthand adversary has shewn a decided great hand in trumps, (in which case, make your tricks while you can) or, 2dly, If your partner decidedly means to force you-to understand if this is the case, you are to observe, if your partner plays the winning or losing card, of the suit you have refused. former, it is by no means clear he means to force you, and you play your own game. the latter, you are to suppose him strong in trumps, and depend on this, to protect your long suit; a due reflexion on this, will convince you, of the value of that maxim, which enjoins you never to play a strong game, with a weak hand, or vice versa. A few deviations from this, effectually destroys that confidence necessary between partners, and introduces a confusion and consequences, that cannot be too carefully avoided, or too strenuously deprecated.

XXII.—If the circumstances of your

hand require two certain leads in trumps, play off your ace, let your other trumps be what they may.

XXIII.—It is a general maxim not to force your partner, unless strong in trumps yourself. There are, however, many exceptions to this rule: as,

1st. If your partner has led from a single card.

2d. If it saves or wins a particular point.

3d. If great strength in trumps is declated against you.

4th. If you have a probability of a saw.

5th. If your partner has been forced and did not trump out.

6th. It is often right in playing for an odd trick.

XXIV.—It is difficult to judge when to lead trumps The following situations will assist the beginner, to reason, and in general, direct him properly:—

Jst. With six trumps, on supposition your partner has a strong suit.

2d. If strong in other suits, though weak in trumps yourself.

3d. If your adversaries are playing from weak suits.

4th If your adversaries are at the point of eight, and you have no honour, or probability of making a trump by a ruff.

XXV.—It is easy soon to discover the different strengths of good players, but more difficult with bad ones. When your adversary refuses to trump, and throws away a small card, you conclude his hand consists of a strong suit in trumps, with one strong and another weaker suit. If he throws an honor, you know he has two suits only, one of which is trumps. In the latter case, win tricks when you can. Avoid leading trumps, or to his suit; force him, and give your partner an opportunity to trump if possible. This maxim cannot be too maturely considered, as there is a fault which is constantly committed by bad players, and is amongst those most fatal in their consequences. The moment an adversary refuses to ruff, though a winning card, they in violation of common sense, trump out, and not unfrequently give away five or six tricks, which a judicious force would have prevented.

XXVI.—If you are strong in trumps, and have the ace, king, and two more, of your right-hand adversary's lead, there are two ways to play, either to pass it the first time, or else to put on the ace, and play the suit on to force your partner. If weak in trumps, put on the ace, but do not continue the suit.

XXVII.—If you win your partner's lead with the queen, unless in trumps, do not return it; it is evident the ace or king lies behind him, and you give the tenace to the adversary.

XXVIII.—To lead from only three cards, unless in sequence, is bad play, and only proper when you have reason to think it is your partner's suit; in which case, play off the highest, though the king or queen.

N. B. This is contrary to the general practice, but un-

XXIX—The first object should be to save the game, if it appears in probable danger; the next, to win it, if you have a reasonable hope of success, by any mode of play, though hizardous. If neither of these is the question, you should play to

the points or score of the game. In other words, you should not give up the certainty of the odd trick, or scoring five or eight, for the equal chance of two, six, or nine; whereas you should risk any equal finesse that will prevent your adversaries from these scores by its success

XXX.—It is generally right to return your partner's lead in trumps, unless he leads an equivocal card, such as a nine or ten. These are called equivocal, because they are led with propriety, both from strong and weak suits. With a quart to a king—or nine, ten, knave and king of a suit, you lead the nine, as you do when it is the best of two or three of a suit.

XXXI.—With only four trumps, do not lead one, unless your strong suit is established, except that with a tierce-major, and another trump, and a sequence to the king of three or more; it is good play to lead trumps twice, and then the knave of your suit, and continue till the ace is out.

XXXII.—If you remain with the best trump, and one of your adversaries has three or more, do not play it out, as it may stop

the suit of your other adversary. If they both have trumps and your partner none, it is right to take out two for one.

XXXIII.—If strong in trumps, with the commanding card of your adversaries' suit, and small ones, force your partner, if he has none of that suit, with the small ones, and keep the commanding card till the last.

XXXIV.—If your partner leads the ace and queen of a suit of which you have king and two others, win his queen, that you may not stop his sui.

XXXV.—If your right-hand adversary wins, and returns his partner's lead, should you have the best and a small one, play the latter. If your partner has the third best he will probably make it. If your adversary is a bad player, I would not advise this, as they never finesse when they ought to do it.

* If weak in tramps, you should not venture this in other suits.

XXXVI.—If your right-hand adversary calls, and your partner leads through him; with ace or king the nine and a small one, you should finesse the nine.

XXXVII.-If your partner calls before

his turn, he means you should play a trump. Take every opportunity to shew your partner that you can command the trumps. In this case he will keep his own strong suit entire: whereas if the strength of trumps is with the adversaries, his play would be to keep gnard on their suits, and throw away from his own.

XXXVIII.—With ace, knave, and another trump, it is right to finesse the knave to your partner's lead; and if strong in them you should do the same in any suit. If he leads the ten of any suit, you pass it invariably with the ace and knave; unless one trick saves or wins any particular point.

XXXIX.—It is better to lead from ace nine, than ace ten, as you are more likely to have a ten ace in the latter suit, if led by your adversary.

XL.—If your partner, to your winning card, throws away the best card of any suit, it shows he wishes you to know he commands it; if the second best, it is to tell you he has no more of that suit.

XLI.—If very strong in trumps, it is always right to inform your partner of it as

soon as possible. If fourth player, you are to win a small trump, and you have a sequence of three or more, win it with the highest, and play the lowest afterwards.

XLII.—If strong in trumps, do not ruff the second best of any suit your partner leads, but throw away a losing card, unless you have an established saw.

XLIII.—If ten cards are played out, and there remains one entire suit, and your partner leads, if you have king, ten and another, and six tricks, you have a certainty to make the odd one, if you play right, let the cards lie how they will; should your right-hand adversary put on an honor, you must win it, if not, put on the ten: with five tricks, put on the king.

XXIV.—Many good players, in playing tierce-majors, begin with the king and queen. This is often productive of mischief; as, when played at other times from king and queen only, the ace is kept up, and while each thinks his partner has it, and has played accordingly, it unexpectedly appears from the adversary, and disappoints their whole plan.

XLV.—If the fourth player wins his adversary's lead, it is better to return it than open a new suit, unless strong enough in it to support his partner.

XLVI.—With ace, knave, and another, do not win the king led by your lest-hand adversary. You either force him to change his lead, or give you tenace in his own suit.

XLVII.—With ace, queen, &c. of a suit, of which your right-hand adversary leads the knave, put on the ace invariably. No good player, with king, knave, and ten, will begin with the knave, of course it is finessing against yourself, to put on the queen, and as the king is certainly behind you, you give away at least the lead, without any possible advantage.

XXLVIII.—With only three of a suit, put on an honor on an honor; with four or more, you should not do it—except the ace should not be put on the knave.

XLIX.—With king and one more, good players sometimes put it on second, sometimes not: if turned up it should invariably be put on, and generally in trumps. But

queen or knave should never be played, unless a superior honor is turned up on the right.

L.—In playing for an odd trick, you play a closer game than at other scores. You lead from single cards and force your partner, when at another time you would not be justified. It is seldom in this case proper to lead trumps; and few finesses are justifiable. It is a nice part of the game, and experience with attention, will alone teach it with effect.

L1.—If the trumps remain divided between you and your partner, and you have no winning card yourself, it is good play to lead a small trump, to put it in his hand to play off any that he may have, to give you an opportunity to throw away your losing cards.

A remains with two or more trumps, and two losing cards; his partner with a better trump, and two winning cards. It is evident, if he plays off a losing card, he will make merely his two trumps, but if he plays an inferior trump, and put it into his partner's lead, he will play off his winning eards,

nd give A an opportunity to throw away his losing ones.

N. B. This continually occurs, and is necessary to be comprehended.

LII.—When your partner leads, win with the lowest of a sequence, to demonstrate your strength in his suit; but it is often right to win your adversary's lead with the highest, to keep him in ignorance.

LIII.—When your partner plays a thirteenth card, and most of the trumps are unplayed, he in general means you should put a high trump to strengthen his own hand.

LVI.—When you have but a moderate hand yourself, sacrifice it to your partner; he, if a good player, will act in the same manner.

LV.—With three, return the highest; with four, the lowest of your partner's lead. This answers two purposes, by giving your partner an opportunity to finesse, and to shew him you have but three at most in his suit.

LVI.—With the ace, queen, and others of your right-hand adversary's lead, put on a small one, except he leads the knave, in which case put on the ace.

LVII.—When at eight, with two honors, look at your adversary's score, and consider if there is a probability they should save their lurch, or win the game, notwithstanding your partner holds a third honor; if not you should not call, as it gives a decided advantage against you in playing for tricks.

LVIII.—Finessing in general is only meant against one card. There are, however, situations when much deeper are required; but theory alone can never enable the beginner to discover these. Supposing it necessary you should make two out of the last three cards in a suit not played, your partner leads the nine, you have ace, ten, and a small one—Query, what are you to do?—Answer, pass it, though the finesse is against three; for if your partner has an honor in the suit, you make two tricks. If not, it is impossible by any mode of play whatever.

LIX.—With king, queen, &c. of your right-hand adversary's lead, put on one of them; with queen, knave, and another, the knave; with two or more small ones, the lowest.

LX.—The more critically you recollect

the cards the better; at least, you should remember the trumps, and the commanding card of each suit. It is possible to assist the memory by the mode of placing the cards remaining in your hand—viz. Place the trumps in the back part of your hand, your partner's lead the next, your adversary's next, and your own on the outside. It is also right to put thirteenth cards, in some known situation.

LXI.—It is highly necessary to be correct in leads. When a good player plays an eight and then a seven, I know he leads from a weak suit; the contrary, when he plays the seven first: the same even with a tray or a deuce. This is what bad players always err in, as they never can see the difference.

LXII.—If left with the last trumps, and some winning cards, with one losing one, play this first, as your adversary on the left may finesse, and the second best in your partner's hand make the trick; which could not be kept till the last.

LXIII.—Should your partner refuse to trump a certain winning card, try to get

the lead as soon as you can, and play out trumps immediately.

LXIV.—Good players never lead a nine or ten, but for one of these reasons—

- 1st. From a sequence up to the king.
- . 2d. From nine, ten, knave, and king.
- Sd. When the best of a weak suit not exceeding three in number.

own hand, you are certain it is for the latter reason, and that the whole strength of the suit is with your adversary, and play your game accordingly.

LXV.—If your partner leads the nine or ten, and you have an honor, with only one more, put it on: if with two or more, do not; with the ace and small ones, win it invariably; for it is better that he should finesse, in his own suit, than you.

LXVI.—Unless you have a strong suit yourself, or reason to suppose your partner has one, do not trump out, unless you have six trumps.

LXVII.—There are situations where even good players differ; if a queen is led on your right-hand, and you have are or king and

two small ones, you should certainly win it; but having king or ace, ten and a small one, I invariably pass it, and for the following reasons—by passing it, if your partner has the ace or king, you clearly lie tenace, and the leader cannot possibly make a trick in the suit, which he must have done had you even the first trick, as he would lie tenace over your partner. If your partner has the knave, you lose a trick, but the odds are greatly against this.

LXVIII.—It is seldom right to lead from a suit in which you have a tenace. With ace, queen, &c. of one suit: king, knave, &c. of a second; and third weak one, the best play is to lead from the latter.

LXIX.—When it is evident the winning cards are betwixt you and your adversaries, play an obscure game; but as clear a one as possible, if your partner has a good hand.

. LXX.—It is equally advantageous to lead up to, as through an ace; not so much so to a king, and disadvantageous to the queen turned up.

LXXI.—Avoid at first playing with those who instruct, or rather find fault, while the

hand is playing. They generally are unqualified by ignorance, and judge from consequences; but if not, advice while playing does more harm than good, by confusing a beginner.

LXXII.—It is seldom right to refuse to ruff when your partner, if a good player, visibly intends you should do it. If a bad one, your own hand should direct you.

LXXIII.—If you have ace, king, and two more trumps, and your partner leads them originally, insure three rounds in trumps; but if he leads (in consequence of your shewing your strength) a nine, or any equivocal card, in that case, pass it the first time; by which you will have the lead, after three rounds of trumps; a most material advantage.

LXXIV.—There is often judgment required in taking the penalties of a revoke. Before the score is advanced, if the party revoking has won nine tricks, the least consideration will shew, that the adversaries should take three of them, for if they add three to their own score, they still leave the odd trick to the former; but if the revoking

party are at eight, it is then better for the adversary to score three points, as the odd trick leaves the former at nine, which is in every respect a worse point than eight. On other occasions, it is only to calculate how the different scores will remain after each mode of taking the penalty; and it will be obvious which will be the most advantageous—never losing sight of the points of the game; i. e. scoring eight or five yourself, or preventing your adversary from doing so.

LXXV.—With ace, queen, and ten, of your right-hand adversary's lead, put on the ten.

LXXVI.—When your left-hand adversary refuses to trump a winning card, for fear of being over-trumped by your partner, and throws away a losing card, if you have the commanding card of the suit he discards, play it out, before you continue the former.

LXXVII.—When all the trumps are out, if you have the commanding card of your adversary's suit, you may play your own as if you had the thirteenth trump in your hand.

LXXVIII.—If A, your right-hand adversary, leads a card, and his partner B, putting on the knave or queen, your's wins with the king—should A lead a small card of that suit again, if you have the ten, put it on. It is probable, by doing this, you keep the commanding card in your partner's hand, and prevent the second best from making.

LXXIX.—If weak in trumps, keep guard in your adversaries' suits. If strong, throw away from them, and discard as much as possible from your partner's strong suits, in either case.

LXXX.—Should your left-hand adversary lead the king, to have the finesse of the knave, and it comes to your lead, if you have the queen and one more, it is evident the finesse will succeed. In this case, play the small one through him, which frequently will prevent him from making the finesse, though he has originally played for it.

LXXXI.—If your partner shews a weak game, force him, whether or no you are otherwise entitled to do it.

LXXXII.-When you are at the score

of four or nine, and your adversaries, though eight, do not call, if you have no honour, it is evident your partner has two at least. It is equally so, if you have one, that he has at least another. If both parties are at eight, and neither calls, each must have one.

A little reflection will enable the beginner to make a proper advantage of these data.

LXXXIII.—When your partner leads a card of which you have the best and third, and your right-hand adversary puts on the fourth, the second only remaining—it is a commonly received, but erroneous opinion, that the chance of succeeding in the finesse is equal; but here calculation will shew, that as the last player has one card more than his partner, it is that proportion in favor of his having it. With three cards, it will be three to two against making the finesse.

LXXXIV.—Moderate players have generally a decided aversion to part with the best trump, though single; thinking, that as they cannot lose it, and it can make but one trick, it is immaterial when it does so—this is a dangerous fault. When your ad-

versary plays out his strong suits, ruff it immediately, before you give his partner an opportunity to throw off his losing cards. Do not, however, go into the contrary extreme, or trump with the best trump, with small ones in your hand, for fear of being over-trumped. This is a nice part of the game, and can only be understood from practice and attentive reasoning.

LXXXV.—It frequently happens that your partner has an opportunity to shew his strong suit, by renouncing to a lead. If you have a single card in this, play it before you force him, let your strength in trumps be what it may; as it is the way to establish the saw, which is almost always advantageous, should the second player put on the ace to prevent it; still it is of great utility by establishing your partner's suit.

LXXXVI.—A has ace, knave, ten, and a small card of the suit led by his right-hand adversary. Querc—Which is he to play? Answer—In trumps, the ten; in other suits, the small one. For this reason—in trumps, a good player, with king,

queen. &c. leads the lowest; in other suits the king: and in the latter case, of course an honor must be behind you; and be it in either hand, you can do no good by putting on the ten; by keeping the three together you render it impossible for your adversary to make one trick in the suit.

LXXXVII.—It often happens that with only three cards remaining in his hand, the leader has the worst trump, and ace, queen, or some tenace of another suit. In this case he should lead the trump, to put it into his adversary's hand to play. By these means he preserves the tenace. This, though self-evident on proper consideration, is what none but good players ever think of.

LXXXVIII.—Though it is certainly more regular to win your adversary's as well as partner's lead with the lowest of a sequence, still I recommend occasional deviations from that maxim; as it is of the greatest advantage to give your partner every information in his, or your own, so it is often to deceive your adversaries in their suits. It will now and then deceive your partner also; but if done with judgment, it is, I

think, oftener attended with good than bad effect.

There are also other situations, where it is highly necessary to deceive the adversary. A, last player, has a tierce-major, and a small trump; a tierce-major, with two others of a second suit; king, and a small one of a third; with queen or knave, and a small one of the fourth, of which his adversary leads the acc. It is so very material for A to get the lead, before he is forced, that he should without hesitation throw down the queen, as the most likely method to induce his adversary to change his lead—But this mode of play should be reserved for material occasions, and not by its frequency give cause for its being suspected.

LXXXIX.—Beginners find it difficult to distinguish between original and forced leads. When a player changes his original suit, he commonly leads his strongest card of another, to give his partner the advantage of a finesse. In this case you are to play this, as if it was your own or adversary's lead—keep the commanding card, tenace, &c. and do not return it, as if it was an original lead.

XC.—There is nothing more necessary to be explained to the beginner, than what is usually denominated under-play, as it is a constant engine in the hands of the experienced, to use successfully against the inexperienced player. In other words, it is to return the lowest of your left-hand adversary's lead, though you have the highest in your hand, with the view of your partner's making the third best, if he has it, and still retaining the commanding eard in your hand.

XCI.—To explain this farther, suppose A fourth player, has ace and king of his left-hand adversary's lead; to under-play, he wins the trick with the ace, and returns the small one, which will generally succeed, if the leader has not the second and third in his own hand. You will see by this, if you lead from a king, &c. and your right-hand adversary, after winning with a ten or knave return it, you have no chance to make your king, but by putting it on.

XCII.—The following is another situation to under-play:—A remains with the first, third, and fourth cards of a suit, of

beer lead lead

which he has reason to suppose his lefthand adversary has the second guarded; by playing the fourth, it is often passed, and A makes every trick in the suit.

N. B. This sort of play is always right in trumps; but if weak in them, it is generally the best play to make your certain tricks as fast as you can; for if you have not your share of them, somebody must have more than their own, and of consequence be weak in some other suit, which probably is your strong one.

XCIII.—Keep the trump card as long as you can, if your partner leads trumps; the contrary, if your adversary leads them. In the former instance, supposing the eight turned up, and you have the nine, throw away the latter; in the last, (though you have the seven or six) play the card you turned up.

CXIV.—When your partner is to lead, and you call before he plays, it is to direct him, if he has no honor, to play off the best 4rump he has.

XCV.—Though according to the strict laws of whist all words and gestures are prohibited; yet like all other laws not enforced by penalties, they are continually violated. There are, indeed, few players

who do not discover, in some degree, the strength of their game, or their approbation or disapprobation of their partner's play, &c. As this is on one side often a material advantage to the party transgressing, so it is quite allowable for the adversaries to make use of it. Attentive and silent observation will frequently give an early insight into the game, and enable you to play your hand to more advantage, than by adhering to more regular maxims.

XCVI.—Though tenace, or the advantage of position, cannot be reduced to a certainty, as at piquet; and that it is often necessary to relinquish it for more certain advantages; still no man can be a whist player who does not fully understand it. The principle is simple, though the combinations are various. It is easily conceived, that if A has ace, queen, and a small card of a suit, of which B has king, knave, and another: if A leads the small card, he remains tenace, and wins two tricks; whereas, if he plays the ace, he gives it up, and makes but one. But if B is to lead, he has no tenace, and lead which card he will, he

must make one trick, and can make no more. This easy instance, well considered, will enable the player, with some practice, to adapt it to more apparently intricate situations.

**XCVII.—The following cases which happen frequently, will further explain this:—A is left with four cards and the lead, viz. the second and fourth trump, and the ace and a small card of a suit not played. Nine trumps being out, B, his left-hand adversary, has the first and third trump, king and a small one of the suit of which A leads the ace. Quere—What card should B play? Answer—The king; by which he brings it to an equal chance whether he wins three tricks or two; but if he keeps the king he cannot possibly win three.

By placing the cards you will perceive, that if B's partner has a better card than A's, it prevents A from making either of his trumps, which, had B retained the king, he must have done.

XCVIII.—A has three cards of a suit not played, (the last remaining) viz. king, queen, and ten; B, ace, knave, and ano-

ther; A leads the king; if B wins it, he gives up tenace, and gets but one trick; whereas, if he does not, he makes his ace and knave by preserving it.

XCIX.—A has ace, knave, and ten, of a suit which his partner leads. Quere—Which should he put on? Answer—The ten, particularly if it is a forced lead; by this he probably wins two tricks. If he puts on the ace, and his partner has no honor in the suit, he gives up the tenace, and can only win one.

C.—Tenace is easily kept against your right-hand; but impossible, without great superiority of skill, against your left-hand adversary.

CI.—To explain what is meant by playing to points, place the following hand before you:—A has the two lowest trumps, and two forcing cards, with the lead. The two best demonstrably in the adversary's hands; though uncertain if in the same, or divided. Nine cards being played, and no other trump remaining—Quere—What is A to play? Answer—This can only be decided by the situation of the score, and

whether or no it justifies the hazarding two tricks for one. The least consideration will convince the player, that before the score is much advanced, it would be highly improper for A to play a trump, because he manifestly ventures two tricks for one; of course he should secure two tricks by playing a forcing card. But suppose A to be at the score of seven, and that he has won six tricks, he should then as clearly venture to play the trump, because, if the trumps are divided, he wins the game, or otherwise, remains at seven, which is preferable to the certainty of scoring nine. But if the adversary is at nine, this should not be done, as by hazarding the odd trick, you hazard the game.

N. B. This mode of reasoning will in general direct you where and why finesses are proper or improper. For there is scarcely one, though ever so right in gemeral, but what the different situations of the score and hand may render dangerous and indefensible.

CII.—The following critical stroke decided one of the most material rubbers that was ever played, and is recommended to the attentive perusal even of proficients:—

The parties were each at nine. A had

won six tricks, and remained with knave and a small trump, and two diamonds, with the lead. B, his left-hand adversary, with the queen and ten of trumps, and two clubs. C. his partner, with two small trumps, and two diamonds. D, last player, with ace and a small trump, a club, and a beart. A led a diamond, which being passed by B, was to be won by D. Quere-How is D to play, to make it possible to win the odd trick?-Answer-D saw it was not possible, unless his partner had either the two best trumps, or the first and third, with a successful finesse. He therefore trumped with the acc, and led the small one, by which he won the game.

N. B. In another score of the game this would not be justifiable, as the chance of losing a trick is greater than of gaining one by it.

CIII.—The attentive perusal (in the mode prescribed) of these maxims, will, I think, with a little practice, enable a beginner to play with very good cards to advantage. The difficulty of the game does not consist in this; for aces and kings will make tricks, and no skill can make a ten win a knave. But there are hands which

frequently occur, when skilful players win, where bunglers lose points; and (unless when the cards run very high) it is on the playing of such success depends, viz. ace or king, and three other trumps, a tierce-major, with others of a second suit, with a probable trick in a third—the player's plan should be, to remain either with the last trump, or the last but one, with the lead: and to accomplish this last, he must not win the second lead with the commanding trump, but reserve it for the third. Nothing then but five trumps in one hand, can probably prevent his establishing his long suit, for he forces out the best trump, and the thirteenth brings in his suit again. which (without the lead after the third round of trumps) would be impossible.

CIV.—As this maxim is of the utmost consequence, the following cases, which happen frequently, are added, to make it more clearly understood:—

1st. A has ace and three trumps, a strong suit headed by a tierce-major, and a probable trick in a third, with the lead. Quere—How should this hand be played? Answer—

A should lead a trump; but if his partner wins and returns it, A should not put on his ace, but suffer it to be won by his adversary. When either A or his partner gets the lead, he of course plays a trump, which being won by A, he remains with the lead, and one, but not the best trump, though they should not be equally divided. This (his strong suit having forced out the best) establishes it again, notwithstanding the adversary may command the other suits, which are by these means prevented from making.

N. B. Had the ace been put on the second lead, the force would have been on A, and his strong suit entirely uscless.

2d. A, with a similar hand, has ace, king, and two small trumps. If the adversaries lead trumps, he should not win the first trick, even if last player. By this, after the second lead, he still retains the best for the third, according to the maxim, and establishes his suit (though the best trump keeps up against him) unless there are five in one hand originally.

3d. With ace, queen, and two small trumps, do not win the knare led on your

left-hand, but let it be played again; according to the same maxim.

As the following, or nearly similar situations frequently occur, I recommend them to the attentive perusal of those students who feeling, within themselves, that they comprehend what I have called the alphabet wish to procure a gradual insight into the game. The whole combinations of which, I cannot too often repeat, proceed from very plain and simple principles; but it requires much reflexion to comprehend the same maxim, when applied to inferior cards, that appears self evident in the superiors. There is scarcely a player, who if he has the ace, king, and knave of the suit of which his right-hand adversary turns up the queen, but will lead the king, and wait for the return to finesse his knave. But with ace, queen and ten, (the knave being turned up on his right-hand) the same player will not see that his lead, if he plays a trump, is the queen, and that one and the same principle actuates the players on both occasions, and so on through the suit.

It constantly happens, that the adversary

on the right-hand having won his partner's lead with the ace or king, returns the knave. In this case do not put on the queen, as the probability is against its being finessed. But on all these occasions, play without hesitation, which constantly directs a skilful adversary where to finesse to advantage.

It frequently happens when you have led from six trumps, that after your second lead you remain with three or four trumps, but the best in your adversary's hand; in these situations, play a small trump, which has these two advantages—1st, To prevent the stopping of your partner's suit—and 2d, To give you the tenace, in whatever suit is lead by the adversary. This mutatis mutandis will shew, that it is bad play to play out the best trump, leaving others in the hand of one of your adversaries. It may do good to keep it up, by stopping a suit, and can answer no good purpose whatever to play it out.

A remains with the best trump (say the ten) and a small one, with some losing cards. B, his partner, having clearly the second best (say the nine) with some winning cards.

The adversaries having one small trump and winning eards of the other two suits. A is forced. Quere—How is he to play? Answer—A is to ruff with his best, and lead out his small trump, by which he puts it into his partner's hand, to make his winning cards, and renders those of his adversaries of no use whatever. This mode of play would sometimes be right, even when it was not certain whether the 2d best trump were in his partner's or his adversary's hand; but the fine player alone can be expected to distinguish on so nice an occasion.

There are points where good players disagree. Some play what is called a forward—others a more timid game. Some commonly put on a king, second; others, but rarely. In these cases, a man may play either way, without committing error; but where all good players are of the same opinion, it should be received as an axiom—no good player puts on a queen, knave or ten second; of course, it should on all occasions be carefully avoided.

CV.—The possession of the last trump is of most material advantage in the hands of

a good player. A has the thirteenth trump, with the ace and four small ones of a suit not played, of which the adversury leads the king and queen: by passing them both, A probably makes three tricks in the suit; but had he won the king, he could not possibly make more than one.

CVI.—When it is in your option to be eight or nine, it is material always to choose the former score.

CVII.—Observe carefully what is originally discarded by each player, and whether, at the time, the lead is with the partner or adversary. If with the former, it is invariably meant to direct the partner—if with the latter, it is frequently intended to deceive the adversary, and induce him to lead to his strong suit.

CVIII.—You are not only to take every method to preserve the tenace or advantage of position to yourself, when it is evident that the winning cards lie between you and your adversary; but also to give it, as much as possible to your partner, when you perceive the strength, in any suit, is in the hands of him and your left-hand adversary;

always keeping in your mind, that when the latter or you lead, the tenace is againstif your partner leads, it is for the adversary. It frequently happens, that by winning your partner's trick, when last player, you accomplish this. A has king, knave, (or any other second and fourth card) with a small one of a suit, that B, his left-hand adversary, has the first and third, and another, with the lead. If A leads his small card, and B, your partner, wins it; you, last player, should if possible win the trick, though it is your partner's. By which means you prevent A from making a trick, which he must have done, had the lead remained with B.

CIX.—As I have ventured to recommend occasional deviations from what is considered as one of the most classic maxims; i.e. the leading from single cards, without that strength in trumps hitherto judged indispensibly necessary to justify it; I give the reasons that influence my opinion, in favor of this practice, with those generally alleged against it, leaving the reader to determine between them. Two objections are

made, which it cannot be denied, may and do happen. The first, that if your partner has the king of the suit guarded, and the ace behind it, he loses it; which would not be the case, if the lead come from the adversary. The second, and most material, is. that your partner, if he wins the trick, may lead out trumps, on the supposition it is your strong suit, or the adversaries from suspecting your intention. On the contrary, the constant and certain advantages are the preservation of the tenace in the other two suits, which I suppose you to have, and the probable one of making your small trumps, which you could not otherwise do. A has four small trumps, ace, queen, &c. of the second suit; king, knave, &c. of a third; and a single card of the fourth. In these sort of hands, I am of opinion, that the chance of winning, by leading the single card, is much greater than of losing tricks. And I appeal to those who are in the habit of attending whist tables, whether they do not frequently see the players, who proceed more exactly according to the maxims of Hoyle, &c. after losing the game, trying to

demonstrate that this ought not to have happened, and that they have been vanquished by the bad, not good play of their adversaries. I do not recommend in general leading from single cards, unless very strong in trumps; but with such hands as I have mentioned, I am convinced it may be occasionally done with very great, though not certain advantage. It may not be unnecessary to inform the reader, that most of Hoyle's maxims were collected during what may be called the infancy of whist; and that he himself, so far from being able to teach the game, was not fit to sit down even with the third-rate players of the present day.

I shall conclude these maxims by a short recapitulation of the most material ones, by way of fixing them in the minds of the readers.

1st. Let them be assured, that without comprehending the leads, modes of playing sequences, and an attentive observation of the board, it is as impossible to make any progress in the science of whist, as to learn to spell before they know their alphabet.

VOUNG WHIST PLAYER

2d. That accustoming themselves to reason by analogy, will alone teach them to vary their play according to circumstances; and shew them, that the best play in some, is the worst in different situations of the It is common to see even good players hazard the game, merely to gain the applause of ignorant by-standers, by making as much of their cards as they are capable of; and this pitiful ambition cannot be too much guarded against. Avoid also the contrary extreme, the faults of the old, and many of their imitators of the new school. These never part with a tenace, or certain trick, though for the probability of making several; and are like fencers who parry well but cannot attack. No player of this kind can ever excel, though they reach mediocrity.

I must also repeat my advice to proficients, to vary their play according to the set they are engaged with; and recollect that it would be of no advantage to speak French like Voltaire, if you lived with people who

are ignorant of the language.

MATTHEWS' ADVICE TO THE

ON LEADS.

1.—THE safest leads are, from sequences of three or more cards head the highest, and put on the lowest to your partner's lead; but the highest on your adversary's. With a tierce to the king and several others, begin with the knave.

2.—With ace, king, knave, and three small trumps; play out the ace and king—with only two, the king, and wait for the finesse of the knave. In other suits, without great strength in trumps, or with the hopes of a particular point, do not wait for the finesse.

5.—Ace, king, and five others, lead the ace in ull suits. With four or less, the lowest, if trumps. In other suits always the ace, unless all the trumps remaining are with you and your partner; in this case, a small one.

4.—Ace, queen, knave, &c. in all suits, the nee. Ace, queen, and ten, with others, in trumps, a small one; but if with three, unless very strong in trumps, lead the ace in other suits.

5.—Ace, knave, with small ones, lead the lowest in trumps; in other suits, if with more than two, lead the ace, unless very strong in trumps.

6.—Ace, with four small ones, in trumps, lead the lowest. If with four or more, in other suits, and not very strong in trumps, the ace.

N. B. It is the general custom with ace and one other to lead the ace—this is right if you have reason to think it your partner's suit, otherwise lead the small.

7.—King, queen, ten, &c. in all suits, lead the king; but if it passes, do not pursue the lead, as certain the ace is in your partner's hand, as it is often kept up, but change your lead, and wait for the return from your partner when you have the finesse of the ten, if necessary.

8.—King, queen, and five others, in all suits, the king. With four or less in trumps, lead the lowest. In other suits always the king, unless you have the two only remaining trumps, if so, you may play a small one

YOUNG WHIST PLAYER.

- 9 -King, knave, ten, &c. in all suits, lead the ten. King, knave, and two or more small ones, the lowest.
- N.B. You should not lead from king, knave, and a small one, unless it is clearly your partner's suit, in which case, play off your king and knave.
- 10.—Queen, knave, nine, and others, lead the queen. Queen, knave, with one other, the queen. Queen, knave, with two or more, the lowest. Queen, ten, and two others, the lowest. Queen, and three small ones, the lowest. Queen, or knave, with only two, the queen, or knave.
- N. B. The trump card sometimes occasions a deviation from these rules. A has the ace or king, with a sequence from the ten downwards, of the suit of which his left-hand adversary turns up knave, or queen—A should lead the ten. If the knave or queen be put on, you have a finesse on the return, with the nine: if not, your partner, with an honor, will pass it, and is either way advantageous.

The following calculations are sufficient for a beginner; deeper ones frequently puzzle even the proficient:

inat either player has not one named car		
your own hand, is	2	to 1
5 to 4 in favour of his having	1	of 2.
		: 0

N. B. The odds are so considerable, that no player has two or more named cards, that scarcely any situation justifies playing on this supposition, except the impossibility of saving or winning the game otherwise; of course further calculations are more for curiosity than utility.

The odds of the game are calculated according to the points, and with the deal:

wors	e than	8. It is	3 to 1 in	favor of the fi	irst game.
and	so on,	except	that 9 is	considered as	something
2	love				10 to 8
- 4	love				10 to 9

N. B. Notwithstanding that calculations are in general occurate, it is difficult to conceive that 10 in 20 is 3 to 1, while 5 in the 10 is but 2 to 1, and even 6 in 10 but 5 to 2. I am

MATTHEWS' ADVICE TO THE

convinced whoever bets the 3 to 1, will lose on a long run; and on the contrary, he who bets the 2 to 1, and 5 to 2, will gain in the same proportion.

The odd trick has been always supposed in favor of the leader; but this is an error, as the dealer has the advantage in this, as in every other score.

LAWS OF WHIST.

- 1.—1F a card is turned up in dealing, the adverse party, on naming it, may call a new deal, unless they have looked at or touched the cards, so as to have occasioned it: but if any card, except the last, is faced, it is decidedly a new deal.
- 2.—Should any card player have but twelve cards, and the others their proper number, the deal is good, and he who has the twelve cards pays for any renounce he may have made; but if either have fourteen cards the deal is lost.
- 3.-If the dealer does not turn up the last card, the
- 4.—The deafer should leave the last card on the table till he has played; after which nobody can ask for it, though they may inquire what is trumps at any time. Should he have it on the table after the first round, it may be called, as if showed by accident.
- 5.—Every person has a right before heplays, to call on the players to place their cards before them, which is, in other words, to ask who played them. It is therefore a quibble to say they have no right to make that demand.
- 6.—The party who reminds his partner to call after the trump is turned up, forfeits a point.
- 7.—If one of the players omit playing to a trick, and remain with a card too many, it is at the option of the adversaries to call a new deal.

YOUNG WHIST PLAYER

- 8.—If A plays out of his turn to his partner's lead, the last player may play before the first; if to his adversary's, his partner may be compelled to, or prevented from winning the trick at their option.
- 9.—Mistakes relative to tricks may be rectified at any time during the game, whether called or not.—Also honors, if proved to have been called in time, though not scored; but they cannot be claimed after the trump is turned up.
- 10.—If one party calls at any score but eight, the adversaries may, after consulting, call a new deal; the same, if one calls without two, or the other answers without one honor.
- 11.—If any player calls after he has played, the adversaries may call a new deal, but not consult together
- 12.—If any person plays out of his turn, the adversaries have the option to call that card at any time, or direct the player, whose turn it was, to play any suit they choose.
- 13.—If A, supposing that he has won a trick, leads again before his partner has played to it, the adversaries may oblige his partner to win it, if he can.
- 14.—Any player may call a card from his adversary, if he names it, and proves the separation. Should he name a wrong one, he may have his hest or worst card-called of any suit played during the deal.
- 15.—Cards thrown down cannot be taken up again; but may be all called by the adversaries. They may be shewn down by the player, if sure of every trick.
- 16.—There are in fact four penalties on a revoke, which take place of every other score. The adversaries may take three tricks from the party revoking, or three from their score, or add three to their own; and if there still should remain enough to make the party revoking game, they cannot win it, but remain at mue.
- 17.-A revoke is not established before the party revoking has played again, or the trick been turned

MATTHEWS' ADVICE TO THE

and quitted; but the adversaries, at their option, may call from him the highest or lowest of the suit at the time, or the card shewn at any time during the deal.

18.—If a revoke is claimed, the adversaries forfeit the penalty of a revoke, if they mix the cards before it is determined.

19 .- No revoke can be claimed after the cards are cut for the next deal.

It is now sattled, that either of the players may insist on the cards being placed at any time previous to their being put logether. It is also settled, that where a bet is made, that either of the parties scores two, the bet is won by honors, though the adversary has won the game by cards—supposing it betted that A makes two points, if B, his adversary, being at I, makes three by cards if A has & by honors, he still wans his better.

THOUGH these laws are excellent as far as they go; vet experience convinces us they are totally inadequate to meet the various cases that continually occur at whist tables. Hence disputes, wagers, references, &c. arise, which are often decided differently by different referees, unsatisfactorily to the disputants,: and sometimes unaccountably to those uninterested. It has therefore long been a desideratum, that a Code should be attempted, which having undergone the ordeal of examination by proper judges, should, with any addition they may think proper to make, be hung un in the various club-rooms, as a classical authority to be referred to on all oceasions. As nobody has yet undertaken this necessary task, whose acknowledged judgment would prevent all difference of opinion, I have attempted something of the kind. The cases, with their decisions, I know to have happened; and the consequent rules which I endeavour to establish, are founded on the following principle of all laws, viz. That penulties should be in exact proportion to the advantages possible to accrue from the transgression.

YOUNG WHIST PLAYER.

Whether these regulations are adopted or not, if they stimulate some person more capable of the task to accomplish what I fail in, I shall by no means regret the trouble I have taken, or be mortified at the rejection of my opinions.

Case 1.—The parties were each at the score of 8-A, the elder hand called, having but one honor in his hand, and his partner did not answer it. B the next adversary, though he had two honors did not call, as he of course thought it could be to no purpose. The game being played out was won against the honors. This was referred on the spot, and decided in favour of the tricks; but in my opinion, so improperly, that 1 do not hesitate to propose the following Law to be added to the present Code:—

"Whoever calls, having only one honor in his hand should forfeit in proportion to any advantage that actually does or may possibly accrue, from the fault. Should it prevent the adversaries from calling, after the hand is played out, the honors shall take place of the tricks."

Case 2.—The dealer after showing the trump card, through awkwardness, let it fall on its face. It was determined on the spot that the deal should not stand good, but the card having been seen, as there could be no possible advantage made by the mistake, I am of a different, and propose the following addition to the 3d law as it now stands in this book—

"But if the card is shown and falls on its face by accident afterwards; then the deal to stand good."

Case 3.—A playing out of his turn, B his partner was directed to play a trump, B however led another suit, and 3 or 4 cards were played before it was discovered that B had a trump in his hand. It was referred to me on the spot, as no printed Laws reached the case. I decided that the cards should be taken up again and a trump led by B as directed. This decision was approved by both parties, and I propose it as a Law on any similar occasion.

MATTHEWS'S ADVICE TO THE

CASE A.--A called at 8, his partner did not answer, though he had an honour, having a bet on the odd trick. The adversaries contended that the deal should not stand, and a wager was laid in consequence and referred to me. I decided that the game was fairly won, because there could be no possible advantage made of the circumstance as far as related to the game, though it might as to the trick, had that been the case referred. I think it impossible to object to the following law, viz.—

"No one is obliged to answer to his partner's call even though he has the other two honors in his hand."

Case 5.—A at the score of 8, on gradually opening his hand saw two honors in it immediately and told his partner of it, who did not answer. A continuing to look through his cards found a third honor, and shewed them down. It was contended that he had no right to do this, and decided as I hear against him; but I am fully convinced improperly and I propose as a Law, that

"No man having three honors in his hand can be precluded from taking advantage of them at any time previous to his playing a card."

I shall now attempt to frame a Law, which, if agreed to, will in my opinion, put a stop to a practice that, though perhaps not meant so, is in it self absolutely unfair, and what is still worse, is the parent of all those unpleasant disputes and attercations which form the only objections to a game in every other respect calculated for rational amusement. I need acarcely add, that I mean the discovery, by words or gestures, of your approbation of displic to your partner's play, before the deal is absolutely finished. I do not mean to prevent talking over the last hand between the deals, but that it should be absolutely probabiled under a severe penalty to say a word between the turning up of the trump card and playing the last eard of the deal, except what is already allowed by

YOUNG WHIST PLAYER.

the rules of the game—such as to ask what are trumps, to desire the cards may be drawn, &c. The Law I propose is this—

"Whoever shall by word or gesture, manifestly discover his approval or disapprobation of his partner's mode of play, or ask any questions but such as are specifically allowed by the existing Laws of Whist, the adversary shall either add a point to his own score, or deduct one from the party so transgressing, at his option."

CONCLUSION.

I HAVE heen desired by some beginners to whom this book is particularly addressed, to give a minute definition of two words, which though universally used are not generally understood. I mean Tonace and Finesse. Indeed the game depends so much on the comprehension of their principles, that any one desirous of obtaining even a competent knowledge of it, will never regret the trouble of the study.

Many parts of whist are mechanical, and neither maxims nor instructions are necessary to inform the beginner, that an ace wins a king; or that you must follow the suit played, if you have one in your hand.

The principle of the Tenace is simple. If A has the ace and queen of a suit, and B, his adversary, has the king and knave, the least consideration will shew that if A leads B wins a trick, and vice versa of course, in every such situation it is the mulual plan of players by leading a losing card to put it into the adversary's hand to oblige him to lead that suit, whereby you preserve the leaace. So far is easily comprehended; but it requires attention with practice; to apply the principle, so obvious in the superior to the inferior cards, or see that the same tenace operates occasionally with the seven and five, as the ace and queen, and is productive of the same advantage: A, last player, remains with the ace and queen of a suit not

MATTHEWS'S ADVICE TO THE

played, the list trump, and a losing card. B, his left-hand adversary, leads a forcing card. Quere—How is A to play? Answer—If three tricks win the game, or any particular point, he is not to ruff, but throw away his losing card, because his left-hand adversary being then obliged to lead to his suit, he remains tenace, and must make his ace and queen. But upon a supposition that making the four tricks gains him the rubber, he should then take the force, as in these situations you are justified in giving up the tenace for an equal chance of making any material point.

The Finesse has a pear affinity to the tenace, except that the latter is equally the object where two, and the former only where there are four players. A has the ace and queen of a suit led by his partner, now the dullest beginner will see it proper to put on the queen; and this is called finessing it, and the intention is obviously to prevent the king from making, if in the hand of his right-hand adversary. Should it not be there it is evident that you neither gain or loose by making the finesse; but few players carry this idea down to the inferior cards, or see that a trick might be made by a judicious finesse, against an eight, as a king-but to know exactly when this should be done, requires more skill than in the more obvious cases, united with memory and observation. Another case of finesse even against two cards frequently occurs, and the reason on reflection is self evident.

A leads the ten of a suit of which his partner has acc, knave, and a small one; B should finesse or let the ten pass; even though he knows the king or queen are in his left hand adversary's hand; because he preserves the tenace and probably makes two tricks; whereas had he put on his acc, he could make but one—in short, tenace is the game of position, and finesse, the art of placing yourself in the most advantageous one.
